> **WILMAT can provide... HANDLING SOLUTIONS**

> WILMAT, BESPOKE PRODUCT DESIGN AND PROJECT MANAGEMENT

Caring For Our Customers

Wilmats offers a commodity too readily dismissed or even ignored altogether – Service. Many competitors are only too happy to supply goods, but are not interested in solving the customer's problems.

When we receive your enquiry here at Wilmats, we consider it carefully. We may need to visit your site to discuss your handling problem. We advise and help you decide on the best solution.

If your requirement is specialised, we invite you to meet with us for the design briefing, and during manufacture you may like to attend a progress meeting. You are welcome to attend final inspection and testing of your equipment at our factory prior to delivery.

After delivery, we can commission and train your operators to familiarise them with the equipment.

We discuss your contract service and preventative maintenance requirements to ensure a long trouble-free working life.

Close contacts with our clients is most important in order to solve their handling problems and ensure optimum return from their investment.

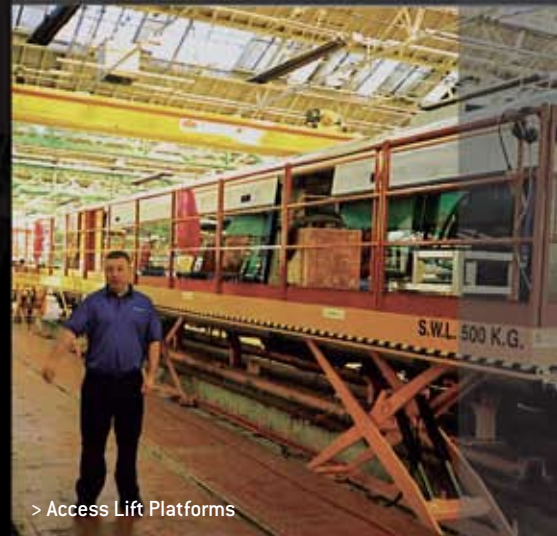

At Wilmats, customer care really does mean caring for our customers.
